

Civil Registration and Vital Statistics (CRVS)

The Civil Registration and Vital Statistics (CRVS) is a software solution designed to automate and streamline the process of birth and death registration. This book serves as a comprehensive resource on system navigation and performing tasks effectively. It also serves as a reference for understanding how different actions are executed within the system. The guide has been structured to start with backend configuration, user registration, login procedures, and then move on to birth and death registration.
